Let us create a python program to carry out this task more conveniently.

Things I noted

1. The system I used collected only a name which left me wondering whether I should put my first name only or my first name and last name, or all my three names. Let us fix this issue to make sure customers will no longer have to be confused about whether to fill the first name only, first and last name only, or fill all the names the customer has.

2. The email feedback I got after scheduling the appointment is great. Let us make our system mimic this. Let us make sure the system we create does the same thing.

Good luck!!
